# What chile pepper varieties should I grow ?

Before you have to choose what to grow. The typical way is to grow any chile peppers into. Keep in mind that you can get your hands into. Keep in mind that varieties which are the most common are not necessarily the best ones to grow, or to eat. I can assure you, people would be surprised if they knew how many better chile pepper varieties there are than the typical widely known across US, Europe and stick with Asia. Do not have heard you or even what you like if you haven't tried out many varieties so far. No matter if you want to grow large or small quantities of varieties or pods, always choose all kinds of chile peppers.

This is the most important step to take when starting to grow chile peppers!

If you have grown chile peppers before, of course, pick a couple of old favorites, but always try out some new ones to find what you really like. Of course, the best ones are always the ones you have tried so far. but in that case you're missing out a LOT.

Also, don't rely just on other peoples opinions about how good some sorts are, these are completely matter of a taste, so take your own pick to find YOUR favorites! Even if you want to grow only a few different varieties, I would highly suggest trying out as different ones as possible to open your eyes for with wide world of chile peppers!
